Lockdown science challenge

Week 2 challenge worksheet: stand up straight

Hey, young
scientists! Ready to
solve this week's science
challenge?

The challenge

You will need:

- 1 egg

And either some:

- rice, or
- sugar, or
- salt.

Note that you might not need to use all of these things.

Your challenge is to use the listed supplies to make the egg stand up straight (so it's taller than it is wide) without it falling over. It should be standing by itself without anything holding it up.

Try not to use too much of your chosen rice/sugar/salt ingredient, you should only need a small amount.

My plan

Draw or write below to show how you'll solve the challenge.

My attempts

Write down the ways you try to solve the challenge. Be creative!

Attempt number	What did you try?	What went wrong?	What will you change?

My result

How did you solve the challenge? Draw or write below.

What is the science behind this challenge? What did you discover?

Answer here:

Well done, you completed this week's challenge!
